

Access Easy Control System

From anywhere – just a click away!

BOSCH
Invented for life

Easy Installation, Easy Management, Reliable Safety

As a small or mid-sized enterprise, it's crucial for you to control access to your buildings. You need to protect your employees and business assets from burglary, vandalism, injury and information loss. The Bosch Access Easy Control System makes it easy for you. The Web-based compact access control system is simple to install and talks to your existing hard- and software without any problem. You can control any movement at any time from your own computer.

This powerful, Web-based access control system requires no new installations or special software. It works with any computer and operating system. And it could hardly be simpler to install and use.

Just run a standard network cable from the Access Easy Control panel to your computer or network port – then open your favorite Internet browser to configure and operate it from anywhere, whenever you like.

The Ultimate in Convenience and Flexibility

The Access Easy Control System helps you secure your premises – with unparalleled ease. The user friendly software interface gives you uncomplicated management. It's versatile and can be easily scaled to handle anything from a single facility to multiple remote premises. Now you can relax in the knowledge that all your business assets are secured around the clock.

Each Access Easy Controller can monitor up to 16 doors. In larger buildings, you have the option of installing an Access Easy Master Controller, which controls 20 Access Easy Controller with 16 doors each. This also lets you flexibly expand the security system as your business grows.

The Access Easy Control System provides a centralized database for access management via a standard Java-enabled Web browser interface.

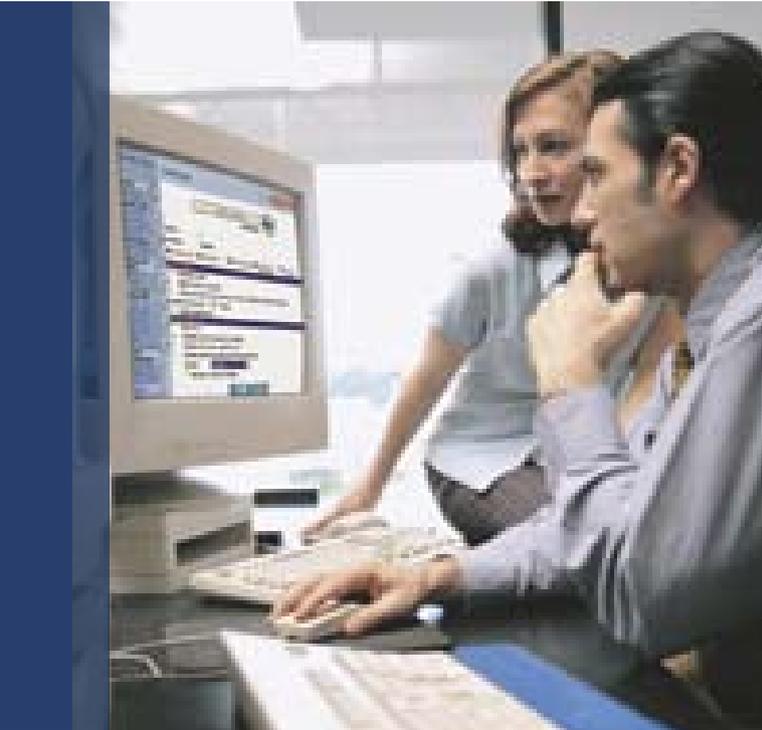

You have full control over all access readers, doors, alarms and other security devices. Identity card screening lets you control who gets in when and where. Thanks to easy parametrization, you can program additional comfort functions – like making the lights turn on or off in response to defined conditions.

The Access Easy Control System is ideal for:

- ▶ Small and medium-sized enterprises
- ▶ Workshops
- ▶ Laboratories
- ▶ Architectural offices
- ▶ Warehouses
- ▶ Shops

The "Five E's" The Essence of Simplicity

Easy to Install

The Bosch Access Easy Control System takes the "plug and play" approach to installation – the integrated parameterizing software enables a quick, simple start-up. Simply connect your existing access readers, door switches and openers to the controller and your new access control system is up and running in no time.

Easy to Network

The Access Easy Control System is a "network-ready" access control panel that's quick and easy to connect to any network. This powerful ability lets you save big-time by optimally deploying your existing IT resources – so you spend less on new hardware.

Easy to Manage

You can access your Access Easy Control System from any computer with a Java-enabled Web-browser or wireless device via a LAN, WAN, intranet or the Internet. So you manage the database, control devices and monitor events from anywhere at any time.

Easy to Maintain and Upgrade

Because the Access Easy Control System doesn't depend on any particular operating platform or system, you can upgrade without changing your computers or operating system. The Access Easy Controller utilizes state-of-the-art flash memory technology to store the system's firmware, which is therefore easy to upgrade (e.g., by downloading it from the Internet) without changing any hardware. This is guaranteed to deliver long-term cost savings.

Easy to Operate

Thanks to the intuitive interfaces of today's Web browsers, it's just as easy to operate, control and monitor an Access Easy Controller as it is to surf the Internet. This also minimizes training requirements for installers, distributors and end users.

The Ideal Technology for Your Security Needs

Web Control Interface

The Access Easy Controller and Access Easy Master Controller each have a built-in Web server. This lets you use any standard Java-enabled Web browser running on a client computer to control access and program the system. Each system has its own, unique IP address – so users only need to log on to its "home page", at any time and from any place.

Operating System Independence

It doesn't matter whether the client computer is a Windows PC, Macintosh or UNIX machine, or runs under some other operating system. The Access Easy Control System gives you complete flexibility, without any extra setup effort.

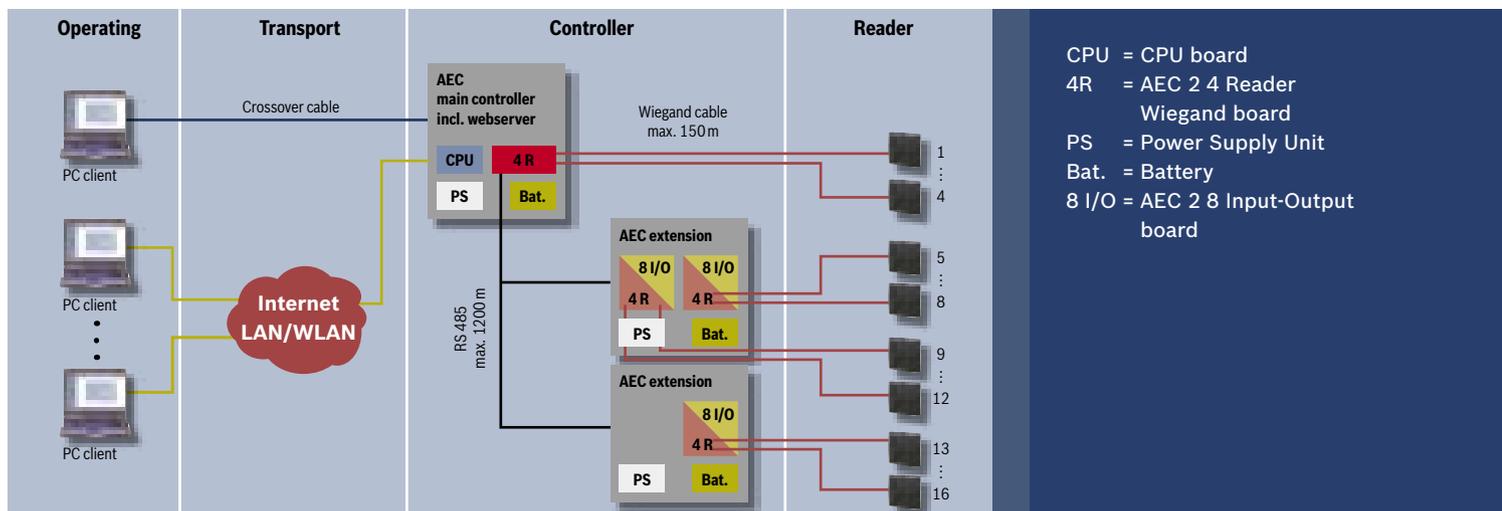

Comprehensive Security Functions

The Access Easy Controller supports a host of state-of-the-art security functions such as access control and presence tracking. E-mail or text messages can be automatically sent to alert personnel to security breaches.

Configuration is made even easier by 255 sets of programmable schedule types. Each set in turn has four programmable time windows for all weekdays and holidays.

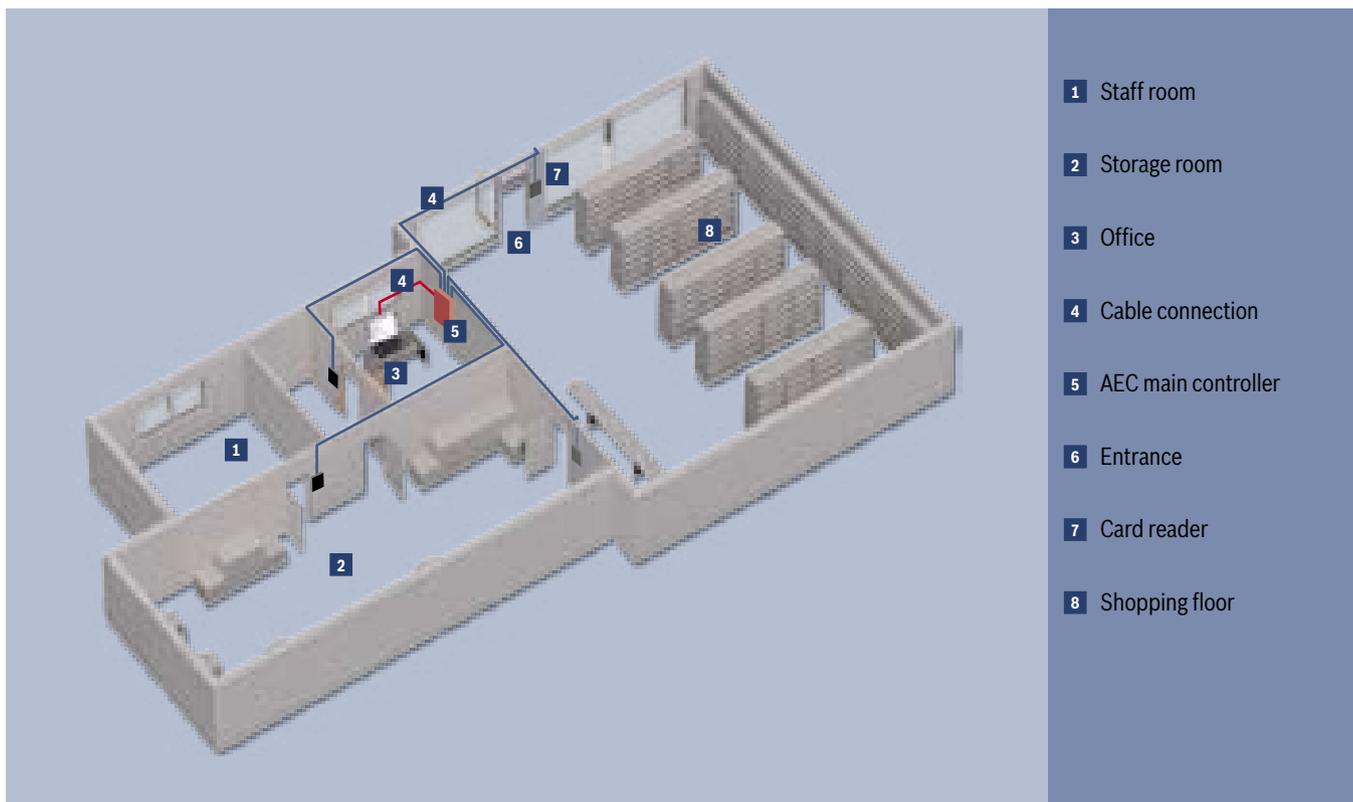

Support for Multiple Languages

In these days of globalization, it's good to know that your access control system can be operated without problem by users from different countries. The Access Easy Control System is available in many European and Asian languages.

Installation and Configuration – In 4 Simple Steps

- ▶ The Access Easy Controller functions as a Webserver. The client computer doesn't need any software – it communicates with the controller via the Webbrowser.
- ▶ You can connect the Access Easy Controller directly to any TCP/IP network via Ethernet by means of a network cable.
- ▶ The configuration is simplified by means of an extended entry/exit program logic with a number of predefined applications. The entries and exits can be defined and networked flexibly. This enables the system to be automatized in order to process all normal types of access situations.
- ▶ Simple maintenance via dial-in using remote modem networking and administration.

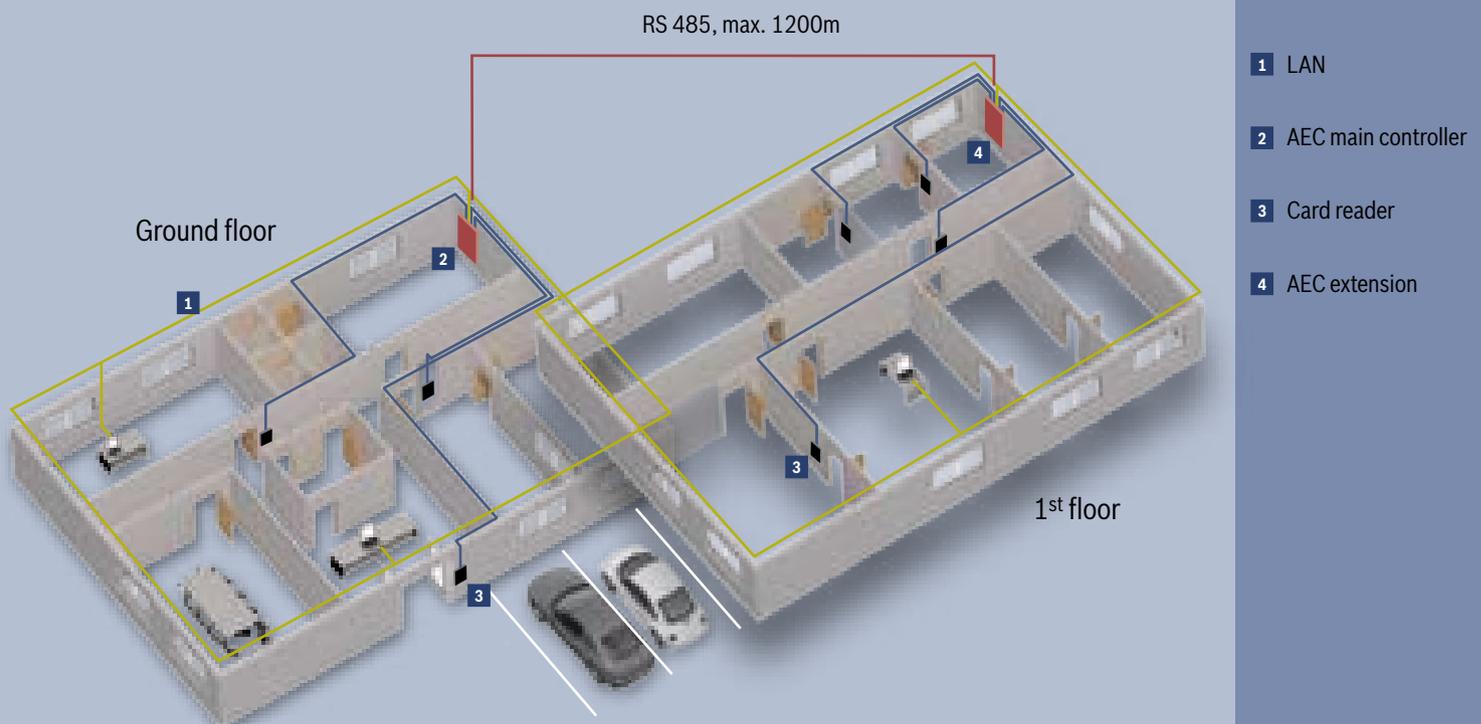

A Flexible System for a Host of Applications

4 door system

The Access Easy Control System is suitable for a wide range of applications. It is easy-to-install and operate even without Internet. Small and medium-sized enterprises need cost-effectiveness, simplicity and the potential for future expansion. Bosch's AEC solution offers direct connection to the controller from the office PC and furthermore no installation of extra software is necessary. Entrances can be surveyed night and day, and are only accessible via cards.

Multiple-Door System

Offices and similar premises frequently have more doors and users to control. Operations should be done via a single PC. As the Access Easy Control System is Web-based, no extra software is necessary. It can also be used with an existing LAN and extensions can be added to meet future need.

A Tradition of Quality and Innovation

For over 100 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.
