

Custom-designed Project Solutions in Conferencing and Public Address

BOSCH

Invented for life

A center of expertise in custom-designed projects and systems

A special department

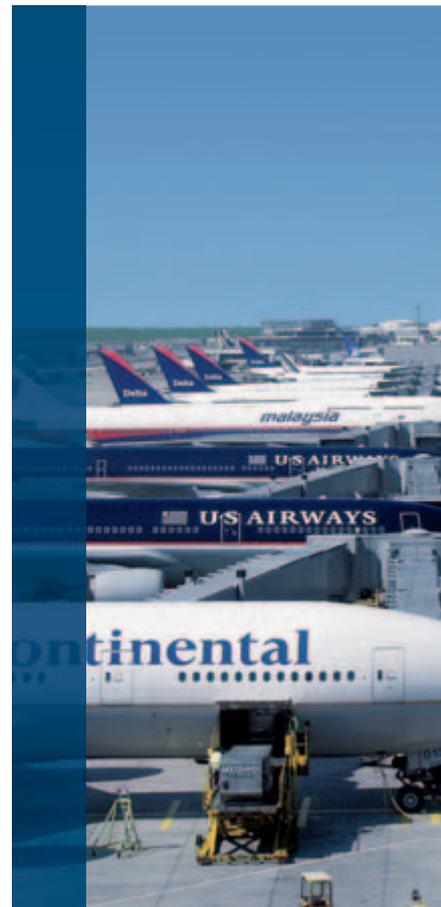

Bosch Security Systems is a global supplier for a wide range of security, safety and communication solutions for any applications involving extensive video surveillance, fire detection, public address, emergency evacuation, access and intrusion systems. Custom-designed Project Solutions is part of the Sales Support Organisation of Bosch Security Systems. This group is dedicated to find innovative ways to meet the unique requirements of specialty conference and public address applications.

When standard solutions simply aren't enough, the Custom-designed Project Solution Group, with its expert project managers and engineers, takes on the most demanding specifications and delivers with excellence.

At every point in the project, from design to delivery and final installation, project management plays a key role, ensuring that everything goes smoothly. Whether it's a dedicated system for conferencing or public address, or a combination of the two, the result is a tailor-made project that exactly meets the need.

Involving stakeholders

The Custom-designed Project Solution Group involves the most important stakeholders – system integrators, subcontractors, clients – so the right people are involved at the right time. That way, everyone works together efficiently and every aspect of the project is taken into account.

Covering every aspect of a project

Complete projects, made to order

We have the scope, the resources, and the expertise to manage even the most demanding projects, no matter what the scale or level of complexity. The custom-design Project Solution Group from Bosch mostly operates within 2 domains: Public Address and Conference solutions.

For public address systems, we have the know-how to support a very wide range of applications, from cruise ships to public transportation terminals and airports.

In the area of conferencing, we specialize in complex applications, such as city councils, parliaments, and international organizations.

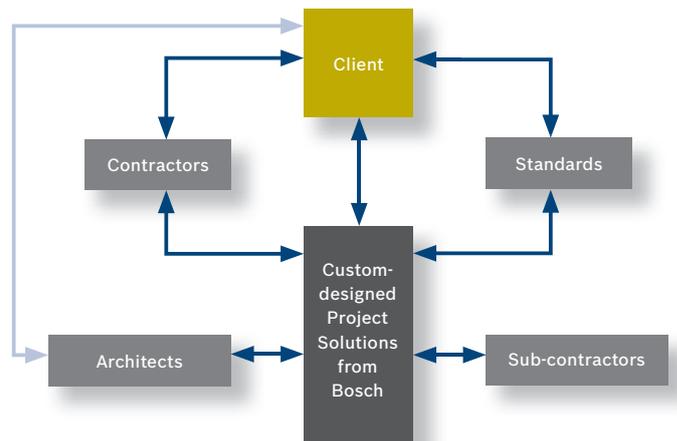

Integration and testing

We take everything into consideration – the existing infrastructure, the acoustics, the training requirements – and create a custom solution that addresses all the relevant issues. Bosch has the ability to cover huge amounts of products and let the new systems interface with the existing ones. To demonstrate that the new system will work to specifications, our specialists can arrange a Factory Acceptance Test (FAT) at the Bosch facility. Or, to make sure everyone is prepared to use the new system, we can arrange on-site training, commissioning and a Site Acceptance Test (SAT).

Effective project management

Bosch has successfully completed large-scale projects around the globe and builds on that experience to carefully control and coordinate every project. The goal is to reach every milestone on time and on budget, taking into account all the many factors that are vital to large undertakings. Our team is used to working with all the necessary organizations and professionals, from financial and legal departments to lawyers, architects, contractors, analysts and subcontractors.

A history of success

Spanish Parliament

The Spanish parliament, housed in a neo-classical building, decided for the installation of DCN Next Generation in combination with thinclient. Server information and display system. 350 workstations equipped with LCD monitor, keyboard, voting keypad and microphone were arranged. The Bosch solution is the first of its kind. A tailored solution that fulfills all conferencing requirements such as speech, electronical voting, speech, attendance registration, access control, but also offers information workstation services similar to those provided in offices. The unique system features innovative transmission via a robust network infrastructure.

Airport Projects

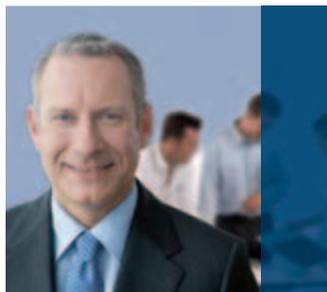

International airports have to meet the highest standards for safety and service. Every area in the facility, from boarding gates and arrival halls to VIP lounges and shopping areas, requires perfect speech intelligibility and automatic messaging. Systems like Praesideo, the public address and voice evacuation system from Bosch are totally integrated into the facility's fire and flight information system. Custom-designed Project Solutions has the expertise and the skills to manage and develop this kind of large-scale projects. They ensure architects, engineers and subcontractors to stay aligned and on track.

Custom-designed Project Solutions from Bosch manages the integration of complex systems in large sized applications such as airports.

A Tradition of Quality and Innovation

For over 100 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.
