## GV3 Control Panel Connections (D9412GV3 Shown)

## 2 Upgrade GV3 Hardware and Programming

## 2.1 Receive Existing Control Panel Programming

### 2.1.1 Update the D5200 Programmer

If you use the D5200 programmer to program the control panel, you must have the current GV2 handlers for all upgrades to GV3. If you have not previously updated your D5200 programmer handlers, download all current GV2 handlers to the D5200 from the handler server.

The versions for the handlers on your programmer must be:

- GV2MAIN v1.04 or later RADXUSR1 v1.06 or later
- RADXUSR2 v1.05 or later
- RADXPNTS v1.08 or later RADXSKED v1.04 or later
- RADXAXS v1.06 or later

- GV2AUX v1.04 or later

To download the handlers:

- 1. Connect an RJ-11 telephone cord between the TELCO port on the D5200 programmer and an outside telephone jack that accepts pulse dialing.
- 2. Turn on the D5200 programmer and enter the password.
- 3. Use the down arrow key to scroll to **UPDATE** and then press the [ENTER GROUP] key.
- 4. Type the name of the handler you wish to update (for example, GV2MAIN), in the **HandName** field.
- 5. Press [ENTER] to scroll to **Phone**.
- 6. Enter the telephone number for downloading handlers, 18006574584.

#### NOTICE!

If the phone line requires you to first dial 9 to reach an outside line, include the 9 in the phone number you typed in *Step 6* (i.e., type 918006574584).

- 7. Press [ENTER] to scroll to Mode.
- 8. Press the space bar until you see **TELCO->A** (or **TELCO->B** if the B card is present in the D5200 programmer).
- 9. Press [ENTER] to begin the handler download.

#### 2.1.2

## Receive Existing Control Panel Programming with a D5200 Programmer NOTICE! GV3 control panels require updated GV2MAIN and GV2AUX handlers. Defaults

GV3 control panels require updated GV2MAIN and GV2AUX handlers. Refer to *Section 2.1.1 Update the D5200 Programmer, page 7* for instructions to download the latest handlers to your programmer.

- 1. Check the programmer memory for available space (> 40 kb free space is recommended).
- 2. Receive a copy of the a handler from the old control panel and save it to your D5200 Programmer.
- 3. If the control panel is a G or Non-G Series control panel, you must manually record the 9000MAIN and the RADXAUX1 programming. You must then add the information using the new GV2MAIN and GV2AUX handlers into the D5200 Programmer before you can send the program to the GV3 panel.

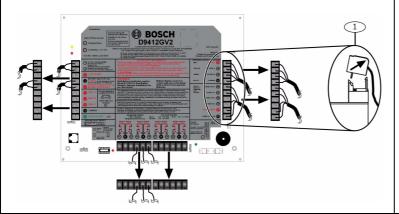

### 2.1.3 Receive Existing Control Panel Programming with RPS

- 1. In RPS, double-click on the control panel name.
- 2. Click **Connect**. Once connected, the **Panel Sync** window opens.
- 3. Select the **Recieve Panel Data** option button and click **OK**.

2.2 Upgrade Hardware to a GV3 Series Control Panel

#### Prepare to Remove Existing Hardware

- 1. Power down the existing control panel by disconnecting the battery and the AC power.
- 2. Remove the four removable terminal strips by tilting the strip up and outward.
  - Do not remove the wiring from the terminal strip.

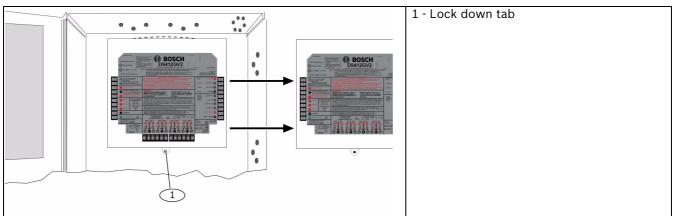

1 - Removable terminal strips

#### 2.2.2

2.2.1

#### **Remove the Existing Control Panel**

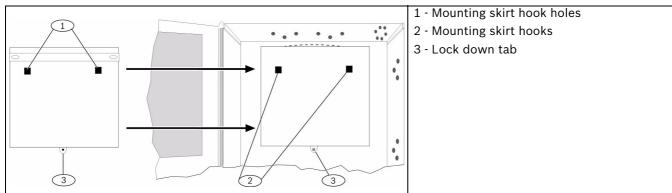

- 1. Remove the lock down tab screw.
- 2. Lift up on the control panel to free it from the enclosure mounting hooks, and remove the control panel from the enclosure it.

#### 2.2.3

#### Install the GV3 Control Panel In the Enclosure

- Place the GV3 Control Panel in the enclosure using the mounting skirt hook holes on the back of the control panel and the mounting skirt hooks on the enclosure.
- 2. Replace the lock down tab screw.

# í

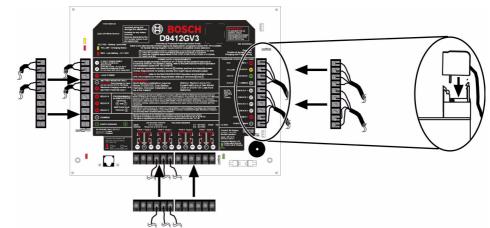

NOTICE!

If the control panel was previously mounted using the screw hole configuration, the you must re-mount the new control panel. The GV3 control panel mounting screw hole locations do not align with the locations for older control panels.

2.2.4

#### **Replace the Terminal Strips**

1. Replace the four removable terminal strips by pushing them straight down until they snap into position.

2. Connect the battery and AC power.

## 2.3 Upgrade Programming to a GV3 Control Panel Programming

#### NOTICE!

You must upgrade G Series and Non-G Series control panels to GV2 programming prior to upgrading to GV3 programming.

#### 2.3.1 Upgrade a GV2 Series, G Series, or Non-G Series Control Panel to a GV3 Using a D5200 Series Programmer

- 1. Send a copy of each saved handler from the D5200 to the new control panel.
- 2. Test the control panel for operation.
- 3. Delete the saved control panel information from the D5200.

## 2.3.2 Upgrade a Control Panel to a GV3 Using Remote Programming Software (RPS) 5.12 or Higher

- 1. In RPS, highlight the control panel name by selecting it.
- 2. Click the **View** button on the **Remote Programmer Toolbar**.
- 3. In the resulting **Panel Data View** window, click the **Edit** button.
- 4. In the resulting **Panel Data Edit** window, select the new control panel type from the **Panel Type** drop-down. (If the control panel is a G or Non-G Series control panel, you must upgrade to GV2 first, and then repeat each of these steps to choose the GV3 control panel.) Click **OK** to close the window.
- 5. Click **Save** in the **Panel View** window to save the changes and close the **Panel View** window.
- 6. Click **Connect**. Once connected, the **Panel Sync** window opens.
- 7. Select the Send ALL RPS Data to Panel option button and click OK.
- 8. Once the sync completes, click **Disconnect** to disconnect from the control panel.
- 9. Exit RPS.

10. Test the control panel for operation.

## **3 Programming the Control Panel**

You can program the control panel with RPS using either a network connection or serial connection.

### 3.1 RPS Programming over a Network Using the DX4020 Ethernet Network Interface Module

For additional information, refer to *IP Address Programming* in the *Conettix DX4020 Network Interface Module Installation Guide* (P/N: F01U045288).

## 3.2 RPS Programming over a Network Using the ITS-DX4020-G GPRS/GSM Communicator

For additional information, refer to the *Conettix ITS-DX4020-G Installation Guide* (P/ N: F01U163066).

## 3.3 RPS Programming Using the DX4010V2 RS-232/USB Serial Interface Module

For additional information, refer to the *DX4020 RS-232/USB Serial Interface Module Installation Instructions* (P/N: F01U083036).

## 4 **Programming to Set Up Central Station Reporting**

## 4.1 Basic Telephone

- 1. Go to PANEL WIDE PARAMETERS (GV2MAIN)→Phone (Phone and Phone Parameters in RPS).
- 2. Enter the primary telephone number in the **Phone 1** field.
- 3. If a secondary telephone number is required, enter it in the **Phone 2** field.
- 4. Go to Panel Wide Parameters→Routing→Route Group 1.
- 5. Enter **1** in the **Primary** field.
- 6. If a secondary telephone is required, enter **2** in the **Secondary** (**Backup** in RPS) field.

## 4.2 Basic Internet Protocol (IP)

- 1. Go to **PANEL WIDE PARAMETERS (GV2MAIN)**→**Routing**→**Route Group 1 Primary**.
- 2. Enter **1**.
- 3. Go to Enhanced Routing→Route Group 1 Primary SDI (88 or 92).
- 4. Select YES.
- 5. Go to **GV2AUX**→**Enhanced Communications**.
- 6. Select or enter the following values:

#### NOTICE!

i

Enhanced Communications settings usually follow the recommendations of Central Stations staff.

If using an ITS-DX4020-G for communication, refer to the *ITS-DX4020-G Installation and Operation Guide* (P/N: F01U163066).

| YES                                      |  |  |
|--|--|--|
| IP address of Central Station receiver   |  |  |
| Port Number of Central Station receiver  |  |  |
| Poll rate recommended by Central Station |  |  |
| 13 sec (default setting)                 |  |  |
| 5 (default Setting)                      |  |  |
| -  |  |  |

maintains the virtual link in most network configurations.

## 4.3 Account Number

NOTICE!

In RPS, go to **AREA WIDE PARAMETERS (GV2MAIN**) and enter the account number (up to 10 digits) in the **Account Number** parameter.

For a D5200 Programmer, receive a copy of GV2MAIN and then go to **AREA WIDE PARAMETERS**→**Area Parameters**. Enter the 4 digit account number in Acct#Digit 7&8 and Acct# Digit 9&10, press **Send-Load** to send changes to panel.

Area 1 is the only area turned on by default.

## 5

## Programming the Control Panel for Common Reporting Options

## 5.1 Set Up Daily Test Report Using a D5200 or RPS

- 1. Go to **RADXSKED** $\rightarrow$ **Schedules** $\rightarrow$ **Skeds**.
- 2. Enter Function Code 9 (Test Report) in an unused Sked.
- 3. Select **NO** for the Deferred parameter to send test reports regardless of other test reports sending between scheduled test reports.
- 4. Select **NO** for the Hourly parameter to send test reports only when the sked executes and not every hour.
- 5. Enter the time at which you wish the schedule to send the report.
- 6. Leave the Date parameter disabled so that the sked executes by days of the week instead of only on a selected date.
- 7. Select **YES** for each day of the week.
- 8. Select NO for:
  - Except On Holiday
  - Holidays 1 4

## 5.2 Set Up Open and Close Reports Using a D5200 or RPS

#### 5.2.1 Area Wide Parameters

To report each area independently:

- Go to AREA WIDE PARAMETERS (GV2MAIN)→Open/Close Options→Acct O/C on the D5200. Go to AREA WIDE PARAMETERS (GV2MAIN)→Area/Bell,Open/Close Options→Acct Open/Close in RPS. Select NO (default).
- Go to Area O/C on the D5200. Go to Area Open/Close in RPS). Select YES (default).

To report by account (Close signal is sent when the last area in an account is armed; Open signal is sent when the first area is disarmed):

- Go to AREA WIDE PARAMETERS (GV2MAIN)→Open/Close Options→Acct O/C on the D5200. Go to AREA WIDE PARAMETERS (GV2MAIN)→Area/Bell,Open/Close Options→Acct Open/Close in RPS. Select YES.
- Go to Area O/C on the D5200. Go to Area Open/Close in RPS. Select NO.

#### NOTICE!

If you want Perimeter Open and Close, select **Perimeter O/C = YES**.

#### 5.2.2

#### Set Authority Level

- 1. Go to USER INTERFACE (GV2MAIN) $\rightarrow$ Authority Levels.
- 2. Go to the Authority Level to be used by users sending Open and Close reports.
- 3. Select E (enabled) for Area O/C (Area Open/Close in RPS).
- 4. Select E for Restricted O/C (Restricted Open/Close in RPS).
- 5. Select **E** for **Perimeter O/C** (**Perimeter Open/Close** in RPS).

## 6 Setting Up Points and Outputs

## 6.1 Using the Relay Option Within Point Assignments

Relay Programming allows any one point or several points to latch a single relay through software when the selected point generates an alarm. Relays are number 1 through 8 and are programmed by entering the number of the relay (1 - 8) in the Relay column in Point Assignments. This relay latches on a generated alarm and resets after acknowledging and then clearing the alarm from memory.

|                          | D8129 Actual Relay Number        |                                   |  |  |  |  |  |  |
|--------------------------|----------------------------------|-----------------------------------|--|--|--|--|--|--|
| Relay                    | D7412GV3/D7212GV3 <sup>1</sup>   | D9412GV3 <sup>2</sup>             |  |  |  |  |  |  |
| 1                        | 9                                | 73                                |  |  |  |  |  |  |
| 2                        | 10                               | 74                                |  |  |  |  |  |  |
| 3                        | 11                               | 75                                |  |  |  |  |  |  |
| 4                        | 12                               | 76                                |  |  |  |  |  |  |
| 5                        | 13                               | 77                                |  |  |  |  |  |  |
| 6                        | 14                               | 78                                |  |  |  |  |  |  |
| 7                        | 15                               | 79                                |  |  |  |  |  |  |
| 8                        | 16                               | 80                                |  |  |  |  |  |  |
| <sup>1</sup> For the D74 | 12GV3 and D7212GV3, connect to T | erminal 28 for data (Zonex 1 Out) |  |  |  |  |  |  |

<sup>2</sup> For the D9412GV3, connect to Terminal 26 for data (Zonex 2 Out).

 Table 6.1
 Actual Relays Latched by Control Panel Type

| Switch Number | Setting |
|---------------|---------|
| 1             | ON      |
| 2             | OFF     |
| 3             | ON      |
| 4             | ON      |

**Table 6.2**D8129 Switch Settings for All Control Panel Types

#### NOTICE!

Programmers must be aware of the following considerations:

- Do not use relays designated within **Point Assignments** for multiple functions. For example, Relays 73 through 80 on the D9412GV3 should not be used for relay-follow-point or area-wide or panel-wide relays.
- Relays should not be selected to follow points programmed as Invisible Points.

## 6.2 Point Index (Default Values)

| Pt Index | Description                                | Pt Index | Description                                      |  |  |
|----------|--|----------|--|--|--|
| Number   |  | Number   |  |  |  |
| 1        | 24-Hour Instant Audible Alarm on Open or   | 17       | D279 (Non-Priority)                              |  |  |
|          | Short                                      |          |  |  |  |
| 2        | Invisible/Silent Hold Up on Short          | 18       | D279 (Priority)                                  |  |  |
| 3        | Fire Pull Station Alarm on Short           | 19       | Easikey Input                                    |  |  |
| 4        | Smoke Detector with Reset Alarm on Short   | 20       | POPIT Motion Sensor Interior                     |  |  |
| 5        | Smoke Detector with Verification Reset and | 21       | POPIT Motion Sensor Perimeter                    |  |  |
|          | Alarm on Short                             |          |  |  |  |
| 6        | Bell Supervision Trouble on Open/Short     | 22       | Fire Supervisory on Open, Trouble on Short       |  |  |
| 7        | Perimeter Instant Alarm on Open or Short,  | 23       | Non-Fire Supervisory on Open, Trouble on         |  |  |
|          | Watch Point when Disarmed                  |          | Short  |  |  |
| 8        | Perimeter Delay on Short, Instant Alarm on | 24       | Local, No Visual or Audible Display on Any Fault |  |  |
|          | Short, Watch Point when Disarmed           |          | Armed or Disarmed with Relay Output              |  |  |

| Pt Index | Description                                    | Pt Index | Description                              |  |  |
|----------|--|----------|--|--|--|
| Number   |  | Number   |  |  |  |
| 9        | Perimeter Instant Alarm on Open or Short,      | 25       | Perimeter Delay on Open, Alarm on Short  |  |  |
|          | Local while Disarmed                           |          |  |  |  |
| 10       | Interior Instant Alarm on Open or Short        | 26       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          |  |          | Short                                    |  |  |
| 11       | Interior Delay on Short, Alarm on Open         | 27       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          |  |          | Short                                    |  |  |
| 12       | Interior Instant Alarm on Open or Short, Local | 28       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          | while Disarmed                                 |          | Short                                    |  |  |
| 13       | Interior Follower Delay on Short, Alarm on     | 29       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          | Open   |          | Short                                    |  |  |
| 14       | Maintained Keyswitch                           | 30       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          |  |          | Short                                    |  |  |
| 15       | Momentary Keyswitch                            | 31       | 24-Hour Instant Audible Alarm on Open or |  |  |
|          |  |          | Short                                    |  |  |
| 16       | Open/Close on Fault                            |          |  |  |  |

 Table 6.3
 Point Index Numbers and Descriptions

#### NOTICE!

#### The default indexes are not always the best selection.

If you experience unwanted trouble conditions, refer to *Table 6.5* on *Page 16* and make any necessary adjustments.

#### Bosch Commercial Wireless points produce a Short when faulted and an Open for a tamper.

| To make a custom Point Index, refer to ( <i>Table 6.4</i> and <i>Table 6.5</i> ). |
|---|

 Table 6.4
 Point Type Selections

#### NOTICE!

\_

The selections in *Table 6.5* indicate:

- D = Delayed Response
- I = Instant Alarm
- S = Supervisory
- T = Trouble
   Blank = No.
  - Blank = No Response

To make a custom point index, use *Table 6.4* on *Page 15* and *Table 6.5* on *Page 16*. For example, to create an Interior Follower point with a delay on Open and Trouble on Short, use Point Type 3 and Point Response 5.

| Point Response<br>Selections* |       | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | Α | В | С | D | Ε   | F |

## 7 Add System Users Locally With a Keypad

## 7.1 Add Users (CMD 56) Using a Keypad

| Step | Operator Entry                         | Keypad Response            |  |  |  |  |
|------|--|----------------------------|--|--|--|--|
| 1    | Enter Command 56                       | Enter Passcode             |  |  |  |  |
| 2    | Enter passcode and press [ENT].        | Enter User #               |  |  |  |  |
| 3    | Enter the user number and press [ENT]. | USER # (default name text) |  |  |  |  |
| 4    | Enter                                  | Change Passcode?           |  |  |  |  |
| 5    | Enter                                  | Enter New Code             |  |  |  |  |
| 6    | Enter the new user's passcode.         | Enter New Again            |  |  |  |  |
| 7    | Re-enter the new passcode.             | Code Changed               |  |  |  |  |

**Table 7.1**Adding Users with Command 56

## 7.2 Add Card (CMD 56) for Access Control Only Using a Keypad

| Step | Operator Entry                        | Keypad Response           |  |
|------|---------------------------------------|---------------------------|--|
| 1    | Command 56                            | Enter Passcode            |  |
| 2    | Enter passcode and press [ENT]        | Enter User #              |  |
| 3    | Enter the user number and press [ENT] | USER# (default name text) |  |
| 4    | Enter                                 | Change Passcode?          |  |
| 5    | Next                                  | Add Card?                 |  |
| 6    | Enter                                 | Present Card              |  |
| 7    | Present the credential to the reader. | Card Added                |  |

 Table 7.2
 Adding Cards with Command 56

#### NOTICE!

To use Add Card (CMD 56), you must program the Assign Door prompt within Command Center Assignments with the D9210B door controller number. If you do not program the Assign Door prompt, the keypad reads 9210 NOT READY.

## 8 Turning the System ON or OFF and Keypad Commands

8.1 Arming and Disarming the System

#### 8.1.1 Master Arming

Enter the passcode and [ENTER] to arm all areas where the user has authority and are areas within the scope of the keypad.

#### 8.1.2 Disarming

Enter the passcode and [ENTER] to disarm all areas where the user has authority and are areas within the scope of the keypad.

#### 8.1.3 Set Duress +1 Using a D5200 or RPS

- 1. Go to **PANEL WIDE PARAMETERS (GV2MAIN)**→**Miscellaneous**→**Duress Type**. Select **1**.
- 2. Go to AREA WIDE PARAMETERS (GV2MAIN)→Area Parameters→Duress Enable. Select YES.
- Go to User Interface→Authority Levels. In the authority levels to be used, select E for the Send Duress parameter.

### 8.2 Basic and Advanced Commands

| Basic Commands                           | Advanced Commands         |
|--|---------------------------|
| CMD 1 (Master Arm) [Master Arms only the | CMD 0 (Bypass a Point)    |
| area assigned to the Keypad]             |                           |
| CMD 11 (Master Arm Instant)              | CMD 00 (Unbypass a Point) |
| CMD 3 (Perimeter Delay)                  | CMD 41 (Test Report)      |
| CMD 4 (Silence Trouble Sounder)          | CMD 42 (Status Report)    |
| CMD 4, 0 (View memory)                   | CMD 43 (Remote Program)   |
| CMD 4, 4 (Walk Test)                     | CMD 45 (Change Time/Date) |
| CMD 4, 7 (Reset Sensors)                 | CMD 49 (Change Display)   |
| CMD 6 (Watch Mode)                       | CMD 50 (Move to Area)     |
| CMD 7 (Special Alert)                    | CMD 51 (Extend Closing)   |
| CMD 8 (Perimeter Partial)                | CMD 52 (Change Sked)      |
| CMD 9 (Special Alert)                    | CMD 53 (Delete Passcode)  |
| CMD 2 Perimeter Instant                  | CMD 54 (Change Relay)     |
|  | CMD 55 (Change Passcode)  |
|  | CMD 56 (Add Passcode)     |
|  | CMD 58 (Fire Test)        |
|  | PRINT LOG (99 [ENTER])    |
|  | VIEW LOG (99 [ENTER])     |

Table 8.1 Basic and Advanced Commands

#### 99 Enter Commands

For each of the following commands, press [9] [9] [ENTER]. Press [NEXT] to view each command.

- 1 View Log
- 2 Print Log
- 3 Display Revision
- 4 Service Walk
- 5 Default Text

## 8.3 SIA CP-01 False Alarm Prevention Options

NOTICE!

Some programming parameters are preset for compliance with SIA standard CP-01 (false alarm prevention). These settings are in **AREA WIDE PARAMETERS (GV2MAIN)** $\rightarrow$ **Area Parameters**. They affect control panel operation as described below.

- **Master Arm-No Exit=YES**: This setting provides for a Perimeter Delay point to be faulted when master arming each area, or the arming state defaults to Perimeter Delayed.
- **Exit Delay Warning=YES**: When this parameter is set to YES, the alarm bell pulses on and off every two seconds for the remaining 10 sec of Exit Delay.
- Entry Delay Warning=YES: When this parameter is set to YES, the alarm bell pulses on and off every two seconds for the remaining 10 sec of Entry Delay.

## 9 Setting DIP Switches

## 9.1 D9127 U/T POPIT Dip Switch Key

POPIT addresses are binary. Refer to *Table 9.1*:

| Switch Number | 0  | 1  | 2  | 3 | 4 | 5 | 6 |
|---------------|----|----|----|---|---|---|---|
| Binary Value  | 64 | 32 | 16 | 8 | 4 | 2 | 1 |

**Table 9.1**POPIT Dip Switch Keys

To calculate the switch settings for POPITS, you must determine the value to use in the calculation. For addresses 9 through 127, subtract 9. For addresses 129 through 247, subtract 129. Use the following procedure with address 48 as the example, substituting the actual values in your calculation.

- 1. Subtract 9 from 48. The result is 39.
- Set the switches that add up to 39 to the OFF positions (32 + 4 + 2 + 1 = 39).
   SW 1 OFF = 32
  - SW 4 OFF = 4
  - SW 5 OFF = 2
  - SW 6 OFF = 1

## 9.2 D9210B Switch Settings

For additional information, refer to the Access Control Interface Module D9210B Operation and Installation Guide (P/N: 32206).

## 9.3 D720, D1255, D1260 Dip Switch Settings

For additional information, refer to:

- D720 Series Keypads Installation Instructions (P/N: 7406918000)
- D1255/D1255B Keypads Installation Instructions (P/N: 7406819000)

or

D1260/D1260B Keypads Installation Guide (P/N: 48101)

### 9.4 D9131A Dip Switch Settings

For additional information, refer to the *Parallel Printer Interface D9131A Installation Guide* (P/ N: F01U135506).

### 9.5 D8129 OctoRelay Dip Switch Settings

For additional information, refer to the *D*8129 OctoRelay Module Operating and Installation Guide (P/N: F01U036302).

## 9.6 D8128C OctoPOPIT Dip Switch Settings

For additional information, refer to the *D8128C OctoPOPOIT Module Operating Instructions* (P/ N: 7407710000).

### 9.7 D8128D OctoPOPIT Dip Switch Settings

For additional information, refer to the *D8128D OctoPOPOIT Module Installation Guide* (P/ N: F01U070537).

## **11** Frequently Asked Questions

#### What does it mean when my keypad reads "CALL FOR SERVICE"?

That keypad is not receiving data from the control panel.

#### What does it mean when my keypad reads "SERVICE KEYPAD"?

A supervised keypad has lost communications with the control panel.

#### How do I arm an area that is not assigned to my keypad?

Add to the **FUNCTION LIST** a menu item with a function code of **1** and with **CC ADDRESS 1-8** set to **YES**, and a menu item with a function code of **2** and with **CC ADDRESS 1-8** set to Yes. Assign the function codes to the necessary command center. The new menu items allow your users to select the area they wish to arm or disarm.

#### How do I perform area-specific functions from a keypad?

Use the **MOVE TO AREA** command (CMD 50) to move to an area within the keypad's scope.

#### Can I default a lockcode without knowing the lockcode?

No. You must send the unit to the Bosch Repair Center.

#### How do I upgrade the control panel version?

Use the supplied firmware upgrade key to upgrade the firmware. Lift the control panel faceplate cover to access the port to insert the upgrade key and read the instructions located on the back of the faceplate.

#### How do I add an access card using the command center?

Use the **ADD USER** command (CMD 56) to add an access card. Present the access card to the assigned door to add the card.

#### What does it mean when my keypad reads "9210 NOT READY"?

No door is assigned to the command center. Check the ASSIGN DOOR parameter within COMMAND CENTER ASSIGNMENTS menu item, and then enter the D9210B address (1 - 8).

#### What are SDI addresses 33 to 40?

They are D9210B addresses.

#### What are SKEDS 41 to 56?

They are Open and Close windows.

#### How do I test a relay from the keypad?

Use the RELAY CONTROL command (CMD 54) to toggle relays.

#### How do I toggle the on-board relays A, B, and C?

Use the RELAY CONTROL command (CMD 54), and then the relay number: 253 for A; 254 for B; and 255 for C.

#### How many Amp Hours can the panel sustain?

You can connect two (2) 18 Ah batteries for a total of 36 Ah. You can gain up to an additional 27 Ah with by connecting a D8132 module.

#### Is the control panel compatible with digital or VOIP phone lines?

The control panel has been tested with only analogue lines. Use a DX4020 to transmit over Ethernet or a ITS-DX4020-G to transmit over cellular. You can use a C900V2 to convert analogue signals to Ethernet for transmission to a D6600 receiver.

#### How do I silence a trouble condition?

Use the SILENCE TROUBLE SOUNDER command (CMD 4) to silence a trouble condition.

#### How do I clear alarm memory?

Ensure all points are normal, and the enter your passcode and press [ESC], or press the [Clear] soft key.

#### How do I determine if I have a ground fault?

On the control panel, measure voltage on terminal 9 (common) and terminal 10 (earth ground). Approximately 6.5 to 6.8 VDC is normal voltage and equals no ground fault. Disconnect wires until you see normal voltage to find your ground.

#### Can I add wireless capability to this control panel?

Yes. Use the Bosch Commercial Wireless Kit (ISW-CWKIT-01) and the proper Bosch Commercial Wireless transmitters to fully integrate wireless on the control panel.

## What type of cable do I use to connect my computer's COM port to a serial-enhanced direct connection using the DX4010i?

A null modem cable is required.

## How can I determine which points are not ready when my keypad reads "NOT READY TO ARM"?

Press the NEXT key to scroll through faulted points. If the VIEW POINT STATUS menu item is enabled, you can access it through the menu to determine the state of the faulted point.

#### What does it mean when my keypad reads "CHECK DEVICE"?

A point is faulted. The point is one that is configured to display as a device in the POINT INDEX by marking YES for the DISPLAY AS DEVICE parameter.

#### I hear a trouble tone from my keypad but no point is shown as in trouble on the keypad. How do I resolve this?

A point generates a trouble tone (buzz) when faulted if is configured to do so. To determine which points are configured to buzz, look in the POINT INDEX for points with a non-zero value for the BUZZ ON FAULT parameter.

#### How can I determine the meaning of an undefined signal received from central station?

Press 99 [ENTER] on the keypad to reveal the VIEW LOG menu item. Locate the signal in the log by date and time.

#### Which reporting formats can the panel send?

Modem IIIa<sup>2</sup> or Contact ID. BFSK was replaced with Contact ID for the GV3 control panel.

#### What is the default Installer Code?

The code is 123.

What is the default User Code?

The code is 123456.

#### What is the default RPS Passcode?

The code is 999999.

#### Is the GV3 control panel keypad programmable?

No. You must program the control panel using the D5200 Series Programmer or RPS version 5.12 or higher.

What is the phone number to update the D5200 Series Programmer? The number is 1-800-657-4584.

Where can I find free documentation and on-line support for this product? Go to www.boschsecurity.us.
