

CM707B Plug On Zone Expander

www.boschsecurity.com

BOSCH
Invented for life

The CM707B Plug On Zone Expander is designed to complement the CM705B Universal Zone Expander. It can be added via the expansion port on the CM705B Universal Expander to provide an additional 8 hard wired zone inputs, bringing the CM705B to 16 hard wired zone inputs for Alarm + Tamper, 4 state monitoring or Single EOL configurations.

Functions

The CM707B Plug On Zone Expander is supplied with both 3K3 and 6K8 EOL resistors and 3 plastic PCB standoffs to mount the module onto the CM705B Universal Expander. You should fit the standoffs to the expander first and then connect the CM705B module. The Status LED flashes to indicate the expander is communicating with the panel. If the LED is ON steady then the module is not communicating with the panel. The CM707B Plug One Zone Expander earthing point connects to a communications earth for maximum lightning protection.

Certifications and approvals

C-tick Supplier Code:	N12138
