

SmartKey hybrid key card

The SmartKey hybrid key card is a combined card with two transponders (HITAG 1 and HITAG)

Functions

The HITAG 1 transponder can be used for the customer access control system. The HITAG 2 transponder is used by the SmartKey.

For this reason, the SmartKey hybrid key card is given two customer-specific codings, one with the system code of the access control system and one with the system code of the SmartKey.

The hybrid key is only available in card form (credit card format), not in regular key form.
