CC816 Alarm Link Software

www.boschsecurity.com

BOSCH
Invented for life

▶ Personal computers able to run DOS

▶ Quick uploads/downloads

▶ Arm/disarm system

▶ Remote operation of programmable outputs

▶ Report capability

The CC816 Alarm Link Software provides a flexible and user-friendly interface between a DOS compatible PC and the CC408, CC488, and CC880 Control Panels. With this software, these control panels can be programmed remotely through a modem or directly from the PC using the Direct Link cable.
It is easy to upload and download programming information between the control panel and the PC, obtain a visual representation of current system status, arm or disarm the system, operate various programmable outputs, and obtain reports of control panel data and journal logs.

Functions

Arm/Disarm System
Once a valid connection is established between the PC and control panel, operators with appropriate security levels can arm or disarm the system and turn sirens on or off.

Remote Operation of Programmable Outputs
Once a valid connection is established between the PC and control panel, operators with appropriate security levels can toggle various programmable outputs on or off.

Report Capability
The last 40 events that have occurred to the control panel can be displayed and, if there is a printer attached to the PC, can be printed for a hardcopy record.

Ten Programmable Security Levels
The system administrator (security level 0) can enable or disable certain Alarm Link functions for each operator by assigning a required security level (0-9) to each function and assigning a security level to each operator. Operators can only perform functions for which they have a valid security level.

Parts included

CC816 is a 3.5 in. diskette that contains version 2.64 of the Alarm Link software.

Technical specifications

Free Hard Disk Space	750 kB minimum
Modems	Optima 14.4 (CC817) or equivalent capable of 300 Baud
Microprocessor	286, 386, 486, or higher
Operating System	MS-DOS version 3.1 or higher

RAM	8 MB
Video	Mono or EGA/VGA color monitor
Operator Input	Mouse or other pointing device

Ordering information

CC816 Alarm Link Software
Creates an interface between a compatible PC and compatible Solution 16, 880, and Ultima 880 Control Panels. Programs control panels remotely through a modem or directly from the PC using the Direct Link cable.
Order number **CC816**

Accessories

CC808 Direct Link Cable
Cable to connect CC816 Alarm Link Software (A-Link) to Solution 862, Solution 880 Ultima, and Solution 16 Control Panels.
Order number **CC808**
