

Fixing notes

The sounder base is designed for surface mounting and is provided for rear and surface cable entry. The sounder insert has to be removed before fixing the mounting base. To release the sounder insert, fixing clamps have to be pushed in direction of the arrows (Fig.2). for rear cable entry, conduit box mounting, feed the cable through the openings. For surface cable feed, please break out the prepared cable entries. Install the mounting base with two screws on a flat dry surface. Therefore, only the prepared fixing bores may be used (see Fig. 2)!

Tone table

The sounder provides 11 tones with an additional second tone option (see table below). Tone selection is via the integrated DIP switches. Volume setting follows infinitely variable via a potentiometer. Both tones can be activated separately, whereby a subsequently activation of the second tone switches off the first tone. Only if the sounder volume is set to the maximum level, the certified sound (no. 1) comply with EN54-3. Certified sound measurements are listed in *Bulletin_Sound_Pressure_Level_EN54-3.pdf* (F.01U.315.263). This document can be obtained from the manufacturer.
