BOSCH

NDA-8000-TBL Tinted Bubble

▶ Easy installation

▶ Impact resistant polycarbonate bubble

The NDA-8000-TBL is a tinted bubble accessory that can help reduce glare from direct sunlight or bright artificial lights, which can interfere with the camera's ability to capture clear images.

By minimizing glare, tinted bubbles enhance the overall image quality, allowing for better visibility and more accurate monitoring in various lighting conditions.

They provide a level of privacy by obscuring the view of the camera's internal components and lens. This can deter potential intruders or unwanted attention, as the camera lens becomes less conspicuous.

The hard coating enhances the bubbles resistance to scratches caused during cleaning or by environmental factors like dust particles.

The tinted bubble is compatible with the following devices:

• FLEXIDOME IP starlight 8000i
• FLEXIDOME IP indoor 8000i
• FLEXIDOME 8100i
• FLEXIDOME 8100i IR
• FLEXIDOME 8100i — X series
• FLEXIDOME 8100i IR — X series
